Muhammad Hanif Sungkar

Building the next AI Platform for SMEs

Jakarta, Indonesia

Summary

Senior Fullstack Software Engineer with 10+ years experience.

I write things here: <https://hanipcode.substack.com/>

I am also open for freelance work, just DM me!

Experience

Xenith

2 years 3 months

Lead Frontend Engineer

December 2024 - Present (1 year 8 months)

Jakarta, Indonesia

Senior Software Engineer, Full Stack

May 2024 - Present (2 years 3 months)

Jakarta, Indonesia

Building a scalable and efficient cross-border payment aggregator platform,
Hired as the first frontend developer for the project and later moved on to Full
Stack Engineer through internal transfer

Key Contributions:

- Spearheaded development of Xenith UI, Design System that are used accross 2 Dashboard and 1 End User product.
- Building the frontend development guideline and standards from scratch.
- Initiating and Implementing frontend monorepo, making it efficient for working accross products, and easier to maintain standard
- Implementing CI/CD for each product, resulting in an efficient continous delivery / release
- Working on Infra that is related to frontend in AWS (S3, Cloudfront, AWS Amplify, Route53)
- Building Server-Side frontend authentication system, making sure no code or data leak.

Fungsi.app

Founder

November 2025 - May 2026 (7 months)

Jakarta, Indonesia

I am building Fungsi, a developer-focused cloud platform designed to provide real-world development environments, AI-assisted workflows, and efficient build & deployment tooling.

My work includes:

- Designing and building the core platform architecture
- Developing cloud-based dev environments and orchestration systems
- Building AI-assisted workflows for development and publishing
- Infrastructure, networking, and DevOps automation
- Cost optimization and scalable platform design

Products under Fungsi:

- Fungsi Cloud — development environments & infrastructure
- Terbitkan — AI-assisted static site publishing
- Funforge — build & deployment tooling

Achievements:

- Designed a modular, multi-product platform architecture from the ground up
- Built end-to-end infrastructure covering compute, networking, routing, and storage
- Implemented cost-efficient infrastructure strategies to keep the platform affordable
- Established engineering conventions and workflows to support future scalability

Ieko Media LLC - VR AR AI dev, PMS Dev, Commercial Media Solutions

Full Stack Engineer (Backend, Frontend, DevOps)

December 2023 - February 2024 (3 months)

Texas, United States

I am consulting for the company to work on the base stack and convention for their software development. My role here including:

- Frontend and backend development

I am building monorepo base for their project for efficient development, including the Docker containerization and CI/CD with github action.

- Devops

I am building a new infrastructure for them that utilize Caddy, Docker, Portainer and DigitalOcean Droplet

- Mentoring engineers

I am also mentoring their engineers to be able to work efficiently and produce better code for the projects.

Achievment:

- Moving their development solution from Managed DigitalOcean AppPlatform to a custom infrastructure solution and reducing their DO Billing from 700\$++ (and growing) to below 100\$ per month

- Implement CI (Github Actions), automate linting, code checking during pull request and reducing bad code merged and bugs resulted

- Implement CD (Github Actions) to automate their deployment check and process reducing failed deployment, and improving deployment time from 10 minutes to 5 minutes.

- Creating Base Monorepo Project that included with a development guidelines to work on the project so during new project engineer can clone the project and also having more unified and streamlined work by following the guidelines

GoTo Financial

Senior Software Engineer (L3), Frontend

April 2022 - June 2023 (1 year 3 months)

in this company I am working as software engineer frontend level III (Senior software engineer). my role including

- create a dashboard app for midtrans.com for the merchants to manage their financial

- working on Asphalt Design System React Components (Gojek's Design System)

- training and onboarding new engineers, helping them familiarize with the project and encouraging unit test

- writing, teaching, and encouraging front-end unit test for team members

Achievement

- Encouraging the team to adding unit test to the project, and teach member who is not familiar with unit test for frontend

- Migrating the project from CRA to webpack with custom config, increasing developer experience

Since we are in process of migrating to ruby to React I built a bridge component so that our react component can be used in the ruby side of the app

- Improve the project CI/CD
- Create a custom webpack reloader for auto reload on saved changes (the built in doesn't work because we open the react app inside a ruby)
- creating RFC for frontend data fetching architecture

DesignFiles.co

Frontend Engineer Consultant

June 2021 - December 2022 (1 year 7 months)

Canada

I was contracted as the only frontend engineer in the company to create and fix UI of the web app

Tech Stack: Ruby on Rails, ERB template files, JQuery, CSS, JS

Achievement:

- make the app mobile friendly by building the responsive version of the web app
- create interactive video tutorial page <https://designfiles.co/videos> using vanilla js

- Doing Research of multiplayer HTML5 Games to improve user engagement. including building and scaling the team.
- 80% Coding, 20% Management (Task, Code Review, Design Review)
- 80% Working on FE side using React and 20% working on HTML5 Game with Cocos Creator
- Build a base boilerplate using webpack. improve productivity and reduce bundle size by 40%
- Build FE Multiversion library, reducing deployment blocked by running campaign by 50%

Project

- Shopee GO / Shopee Monopoly (React, Typescript, Redux)
- Shopee Chicken (Cocos Creator, Typescript)
- FE Multiversion (Typescript, Rollup, React)
- Shopee Arisan (Typescript, React)
- Shopee Share and Win (Typescript, React)

Senior Software Engineer, Frontend
 April 2020 - January 2021 (10 months)
 Jakarta, Indonesia

Keller Williams Realty, Inc.
 Frontend Engineer/React
 September 2019 - December 2020 (1 year 4 months)
 Austin, Texas, United States

I was contracted as Frontend Engineer working on the Map/Listing App

Tech Stack:React.js, Google Map API, Node.js, Next.js, Jest, Enzyme

My Achievement:

- reducing the load in the maps listing by 50% by using windowing technique so the list not getting rendered at the same time
- Implement the unit testing and reduced the bug occurrence by 30%

Fungsi.app
 Co-Founder / Bussiness Owner (Fungsi Coffee and Space)
 December 2018 - December 2020 (2 years 1 month)
 Yogyakarta, Indonesia

We co found Fungsi Coffee and Space <https://www.instagram.com/fungsi.space/> with a mission to be the place for freelancer to have a copy and enjoy working with a good internet connection. but unfortunately we didn't survive pandemic era.

Nusantech
 Full Stack Engineer
 February 2019 - April 2020 (1 year 3 months)

Work Description

- Architected reusable dashboard CMS. boost engineer productivity by 20%
- Designed a best practice for React Native project and guide the team to follow the standard

Working across the stack from backend, frontend, and mobile. reducing bottleneck across the team by 50%

- Reduced bug occurrence with automated testing by 30%

Project

- BNI csv importer (Node JS, SQL)
- Collection App (Node Js, React, Flutter)
- Kapal Api Seller and Customer Mobile App (React Native)
- Beyond Run App (React Native, node js, mongodb, websocket)

Shwetech

Senior React / React Native Developer

October 2016 - February 2019 (2 years 5 months)

Yogyakarta Area, Yogyakarta, Indonesia

I am the second engineer hired by the company, therefore I have experienced building the engineering culture and choosing stack used by the company from the beginning

In this company I am responsible for Web, Mobile, and Backend Development

Projects:

- Hlwintlive app

this is a live stream app that built using react native. the challenge I faced here was since at that time react native isn't really matured especially for writting the native module I had to read the codebase

Tech Stack: React Native, Node.js, Express.js

- Hlwintlive Bot

is a bot for cleaning up ended live in hlwint

Tech Stack: Node.js

- Whatsapp Bot Game

creating a whatsapp bot to make a text-based game

Tech Stack: Python, flask, docker

Education

SMA NEGERI 1 TEGAL

High School, Social Sciences · (2010 - 2013)
